***Restriction***

The examiner has found applicant's remarks with respect to claim 25 persuasive. However, it has now become extremely burdensome to keep multiple patentably distinct inventions together in the same application. Accordingly, restriction as set forth below is now necessary.

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-3, 5-7, 10-13, 26-28, and 30-32 drawn to a securing device, classified in class 403, subclass 308.
- II. Claims 25, 29, and 33, drawn to a method of securing a spring to a reciprocating device, classified in class 29, subclass 700.

Note that claims 4, 8, and 13, are still withdrawn under species election.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product. See MPEP § 806.05(h). In the instant case, the securing device can be used as a coupling between a power transmission between a driving member (a

Art Unit: 3679

first shaft) and a driven member (another shaft) for effecting an axially elastic coupling between the driving member and the driven member thus enabling axial relative movement and compensating for misalignment.

Because these inventions are independent or distinct for the reasons given above and there would be a serious burden on the examiner if restriction is not required because the inventions have acquired a separate status in the art due to their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

A telephone call was made to Mr. William Pieprz on October 18, 2006 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not

Art Unit: 3679

distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
